

## SUCCESS STORY

## MEDICAL DEVICES

## THE CHALLENGE

MESI needed a strategic partner for the assembly of electronics for their medical device ABPI MD – a fast, simple and objective screening tool for the diagnosis of peripheral arterial disease.

## THE SOLUTION

With more than 20 years experience in R&D, manufacturing optimisation and PCB assembly, ATech was the right choice to provide the necessary flexibility and quality that the ABPI electronics demand. To ensure maximum quality and reliability each and every one of the manufactured products are tested.

## OUR PARTNERSHIP

ATech's technical expertise, professionalism and transparent work ethic have secured future collaboration with MESI. MESI's new product was successfully launched on the global market in 2012.

“When you are developing a medical device, it is of upmost importance to have a business partner who can assemble PCB exactly as you have designed it. ATech has been adaptable with regards to negotiating and shown a great understanding of our requirements. They are now providing us with comprehensive PCBs needed for the production of ABPI MDs.”

Daša Košec, chief marketing officer
